

## **Power Supply Jump Start Guideline**

1. Turn off the Power Supply for your safety, set the I/O switch on the back of power supply to the "O" status
2. Unplug the AC power cord from the power supply
3. Unplug all device from the power supply
4. Plug the AC power cord into the power supply. Have the AC coming directly from wall outlet.
5. Short between the green and black wires on the 24-pin connector (as show below), with a paper clip or piece of wire.
6. Turn on the Power Supply, set the I/O switch of the power supply to the "I" status
7. See if the power supply fan is running. If so, your supply is probably good. (The result is a simplifivative reference. For precision-guided examination, please do the online RMA at [www.seasonicusa.com](http://www.seasonicusa.com))
